1. PROJECT NATIONAL OVERVIEW

The National Smart Metering System measure, consolidate and analyse utilities consumption data, both electricity and water, using Smart Meters on the Transnet Azure IoT cloud platform. The points of installation for water and electricity metering are distributed nationally across South Africa. The required overall quantity of Smart Meters required for installation is given on the Scope of Works document. The national distribution of areas of the Smart Meter installations required are shown on the map provided in **Error! Reference source not found.**
